

ASIA'S LEADING AIR AMBULANCE PROVIDER

MEDICAL WINGS

Medical Wings offers 'bed-to-bed' transfers for all types of patients and age groups experiencing severe medical conditions including pre and post natal and pediatric patients. Medical Wings also provides patient escort services for transfers using commercial airlines to global destinations.

Medical Wings offers a 'one stop service and excellent care' by owning or controlling all the major aspects of the patient transport process. Our medical flight crew is on hand throughout the patient transport procedure to ensure that the patient's condition is continually monitored. This enables real time decisions to be taken to manage any risks or complications and ensure that the patient arrives safely at their destination. Each air ambulance mission is supported by a minimum of a two-person medical flight crew that consists of a critical care trained flight doctor and flight nurse who attend the patient throughout the transportation process. Additional crews are assigned based on the patient's condition.

Our Achievement

In 2015, Medical Wings achieved CAMTS standard from the US based Commission on Accreditation of Medical transportation Systems and became the first Asian operator to achieve this prestigious recognition. In 2016, Medical Wings achieved the EURAMI standard of the European Aeromedical Institute, the attainment of the CAMTS and EURAMI standard demonstrates our commitment to safety and quality of service in the air ambulance sector. In 2018, Medical Wings achieved a full accreditation for international fixed wings and medical escort services from CAMTS and CAMTS GLOBAL become the first operator in Asia and only the second operator worldwide to achieve CAMTS 'Dual Accreditation'. This achievement represents a significant recognition of the care and safety standards that we employ when transporting the patients and their companions.
